2 Web Performance Optimization: Cluster-based online monitoring system of web   ◼
traffic
Yun Mao, Kang Chen, Dongsheng Wang, Weimin Zheng
November 2001 **Proceedings of the 3rd international workshop on Web information and data management**
Publisher: ACM Press
Full text available: 📄 pdf(453.72 KB)   Additional Information: full citation, abstract, references, index terms

Web traffic has been increasing and evolving rapidly in recent years. It is important to measure the volume and characteristic of such dominant traffic to understand large-scale user access pattern and analyze performance of Web applications. Among the common methods of Web measurements, the passive way using packet monitoring is more advantageous since it provides comprehensive information and is transparent to end-users. However, the throughput of current packet monitoring system is limited by ...

3 A composable framework for secure multi-modal access to internet services from   ◼
Post-PC devices
Steven J. Ross, Jason L. Hill, Michael Y. Chen, Anthony D. Joseph, David E. Culler, Eric A. Brewer
October 2002 **Mobile Networks and Applications**, Volume 7 Issue 5
Publisher: Kluwer Academic Publishers
Full text available: 📄 pdf(340.33 KB)   Additional Information: full citation, abstract, references, index terms, review

The Post-PC revolution is bringing information access to a wide range of devices beyond the desktop, such as public kiosks, and mobile devices like cellular telephones, PDAs, and voice based vehicle telematics. However, existing deployed Internet services are geared toward the secure rich interface of private desktop computers. We propose the use of an infrastructure-based secure proxy architecture to bridge the gap between the capabilities of Post-PC devices and the requirements of Internet ser ...

4 Experiences with network-based user agents for mobile applications
   Thomas F. La Porta, Thomas Woo, Krishan K. Sabnani, Ramachandran Ramjee
   August 1998 **Mobile Networks and Applications**, Volume 3 Issue 2
   Publisher: Kluwer Academic Publishers

   Full text available: pdf(631.57 KB)   Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index terms</u>

   Wireless networks are characterized by simple end devices and limited bandwidth. One
   solution to address these and other limitations of the wireless mobile environment that
   has been widely pursued is the placement of proxies, or agents, inside the network to
   assist with application processing that would normally take place on end devices. These
   agents can additionally manipulate data to reduce bandwidth requirements and assist in
   providing services. The design and implementation of a user a ...

5 Integrating notification services in computer network and mobile telephony

6 Applications: Digital media and entertainment service delivery platform
   Christopher J. Pavlovski, Quentin Staes-Polet
   November 2005 **Proceedings of the first ACM international workshop on Multimedia service composition MSC '05**
   Publisher: ACM Press

   Full text available: pdf(415.65 KB)   Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>index terms</u>

   The emergence of broadband networks, for mobile and fixed environments, has
   stimulated the multimedia market for the delivery of enriched digital media and
   entertainment services. A key problem for institutions attempting to capitalize on these
   new channels for service delivery is a capability to deploy many multimedia services
   rapidly and cost effectively. The naïve technique is to deploy such solutions independently
   as so called point solutions. The strategic approach is the development o ...

7 Tools for building asynchronous servers to support speech and audio applications
   Barry Arons
   December 1992 **Proceedings of the 5th annual ACM symposium on User interface software and technology**
   Publisher: ACM Press

   Full text available: pdf(946.22 KB)   Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index terms</u>

Distributed client/server models are becoming increasingly prevalent in multimedia systems and advanced user interface design. A multimedia application, for example, may play and record audio, use speech recognition input, and use a window system for graphical I/O. The software architecture of such a system can be simplified if the application communicates to multiple servers (e.g., audio servers, recognition servers) that each manage different types of input and output. This paper describe ...

9 A decision support system for tuning Web servers in distributed object oriented network architectures

R. D. van der Mei, W. K. Ehrlich, P. K. Reeser, J. P. Francisco
March 2000 **ACM SIGMETRICS Performance Evaluation Review**, Volume 27 Issue 4
Publisher: ACM Press
Full text available: pdf(648.79 KB)   Additional Information: full citation, abstract, citings, index terms

Web technologies are currently being employed to provide end user interfaces in diverse computing environments. The core element of these Web solutions is a Web server that is based on the Hypertext Transfer Protocol (HTTP) running over TCP/IP. Web servers are required to respond to millions of transaction requests per day at an "acceptable" Quality of Service (QoS) level with respect to the end-to-end response time and the server throughput. In many applications, the server performs significant ...

12 Towards an active network architecture

David L. Tennenhouse, David J. Wetherall

April 1996 **ACM SIGCOMM Computer Communication Review**, Volume 26 Issue 2
Publisher: ACM Press
Full text available: pdf(1.58 MB)   Additional Information: full citation, abstract, citings, index terms

Active networks allow their users to inject customized programs into the nodes of the network. An extreme case, in which we are most interested, replaces packets with "capsules" - program fragments that are executed at each network router/switch they traverse.Active architectures permit a massive increase in the sophistication of the computation that is performed within the network. They will enable new applications, especially those based on application-specific multicast, information fusion, a ...

13 Mobile applications: Impromptu: managing networked audio applications for mobile users
Chris Schmandt, Kwan Hong Lee, Jang Kim, Mark Ackerman
June 2004 **Proceedings of the 2nd international conference on Mobile systems, applications, and services MobiSys '04**
Publisher: ACM Press
Full text available: pdf(240.36 KB)   Additional Information: full citation, abstract, references, index terms

This paper discusses the software architecture of Impromptu, a mobile IP-based audio computing platform, with an associated set of network-based applications and services. Impromptu merges the communication properties and universal mobility of the telephone with the multi-tasking and open protocol world of the handheld PC. Its supporting architecture handles multiple streaming audio applications, provides speech services for consistent audio user interfaces across applications, and enables user ...

Keywords: WiFi, architecture, audio applications, audio interface, mobility, multi tasking, speech interface, telephony, voice over IP

14 A middleware toolkit for client-initiated service specialization
Greg Eisenhauer, Fabián E. Bustamante, Karsten Schwan
April 2001 **ACM SIGOPS Operating Systems Review**, Volume 35 Issue 2
Publisher: ACM Press
Full text available: pdf(1.29 MB)   Additional Information: full citation, abstract, index terms

As the Internet matures, streaming data services are taking an increasingly important place alongside traditional HTTP transactions. The need to dynamically adjust the delivery of such services to changes in available network and processing resources has spawned substantial research on application-specific methods for dynamic adaptation, including video and audio streaming applications. Such adaptation techniques are well developed, but they are also highly specialized, with the client (receiver ...

Publisher Site

The knowledge required to develop complex software has historically existed in programming folklore, the heads of experienced developers, or buried deep in the code. These locations are not ideal since the effort required to capture and evolve this knowledge is expensive, time-consuming, and error-prone. Many popular software modeling methods and tools address certain aspects of these problems by documenting *how* a system is designed. However, they only support limited portions of software ...

17 In-service QoS monitoring of real-time applications using SM MIB
Yong-Hoon Choi, Iksoon Hwang
January 2005 **International Journal of Network Management**, Volume 15 Issue 1
Publisher: John Wiley & Sons, Inc.
Full text available: pdf(235.82 KB)   Additional Information: full citation, abstract, references, index terms

Current network management needs an end-to-end overview of various flows rather than the information that is purely local to the individual devices. The typical manager-centric polling approach, however, is not suitable to understand network-wide behavior of a large-scale Internet. In this paper, we propose a new management information base (MIB) approach called Service Monitoring MIB (SM MIB). The MIB provides a network manager with dynamic end-to-end management information by utilizing special ...

18 Binaries and bit stream processing: A stream library using Erlang binaries
Jay Nelson
September 2005 **Proceedings of the 2005 ACM SIGPLAN workshop on Erlang ERLANG '05**
Publisher: ACM Press
Full text available: pdf(254.76 KB)   Additional Information: full citation, abstract, references, index terms

An implementation of a Stream Library for *erlang* is described which uses Built-In Functions (BIFs) for fast access. The approach uses binaries to represent and process stream data in high volume, high performance applications. The library is intended to assist developers dealing with communication protocols, purely textual content, formatted data records and the routing of streamed data. The new BIFs are shown to improve performance as much as 250 times over native *erlang* functions ...

Keywords: BIF, binary, erlang, stream

19 Wireless Andrew: building a high speed, campus-wide wireless data network
Bernard J. Bennington, Charles R. Bartel
January 2001 **Mobile Networks and Applications**, Volume 6 Issue 1
Publisher: Kluwer Academic Publishers
